

ATOMIC RACESIMULATOR

ANIMATION®

The AtomicA2 Motion simulator gives an experience that you will not forget.

The simulator moves in all directions to make you feel as if you are actually sitting in the vehicle seat itself. With the fantastic graphics of computer games, and their realistic sounds, the addition of motion to the ride offers an incredibly realistic and immersive experience.

The Atomic is controlled with a Logitech G27 High Precision steering wheel with force feed-back and pedals

The ForceAssist™ technology produces up to a staggering 10x more force and acceleration than systems with similar motor power or power consumption.

The huge 27 degree dual-axis movement range can simulate even the most daring of rides

The Atomic's RealFeel™ dynamic motion control system delivers an exceptionally realistic ride, allowing you to feel every bump & detail in the road. A seat-shaker under his deat lets the driver feel all vibrations coming from the engine or the contat with the road. The powerful tactile transducer system reproduces even small vibrations so you can feel everything, right down to the revs of the engine.

TECHNICAL INFO

Power :	240 volts, 16 amps monophase
Platform :	PC
Screen :	
Standard :	flatscreen 2D/3D, 50 inch (127 cm)
Screen Option :	projection/ledscreen
VR :	optional
Sound :	Dolby 5.1 surround
Free sound option :	extra wireless headset
Space required :	Flatscreen version : 1,5 x 3 m
