

CYCLING SIMULATOR

ANIMATION®

Our cycling simulators allow you to cycle 'virtually'. That means you ride a stationary bike and see the course on a screen. The speed of the images and the resistance you experience when pedalling are thereby perfectly realistic. All parameters such as power, cadence, speed, time and slope are also displayed graphically. On the bike itself, you obviously have to pedal, but also choose the gear according to the difficulty of the course and your sporting ability.

The road bikes supplied are available in different sizes and, apart from road bikes, we can also supply 'Ergo-bikes'. These have a number of adaptations for less mobile persons.

Two systems are available : Tacx Neo and Wahoo Kickr. Wahoo Kickr comes with Climb (makes the bike move with the slope) and Headwind (interactive fan).

The cycling simulators can be supplied with 32- or 49-inch screens and 2 types of displays, one of which has been developed to offer additional branding options.

Animotion can also take care of the video and GPS recording of the courses and their integration into a simulation programme (e.g. Kinomap, Rouvy,...).
